Achieving the desired score on ASVAB is the first step towards a successful career in the army, which means that taking this test can be incredibly important and stressful for many potential recruits. Proper training and study can help you achieve a great score, and it's always a good idea to figure out what to expect before passing the exam. What to expect on the day of the exam may be a different experience, depending on where you can take it. Tests are carried out at military entry processing stations (MEPS) and military entrance tests (MET). If you're close enough to the MEPS site, you'll be controlled by ASVAB on your computer. Those who take the exam on MET sites usually receive a paper-pencil test. No matter what format you get, the questions and difficulty level will be similar. The total testing time is typically 3-4 hours for a paper-pencil version, while the average completion time for a computerized version is approximately 1.5 hours. The reason for the difference is that you can't move on to the next section on the paper-pencil exam without instructions from the proctor to move forward. The computerized test is adaptive: if the candidate correctly answers the question, the complexity increases. That you need to bring the only item you need to bring with you on the day of testing is valid, legal identification. Everything else you may need during testing will be provided to you upon arrival. What doesn't bring you is you don't need to bring any pencils, scratch paper, answer sheets, or testing materials. All of them will be provided to you by the test administrator. Calculators and cell phones or other electronics are not allowed when passing the exam, so do not bring them. Practical tests can help guide your research efforts as ASVAB is a broad test that covers different areas. Sure, you can learn from it on your own, but taking practical tests can let you know which areas you're strong in and can study less, and which areas you really need to focus on to improve your score. Some people just learn better, challenging themselves to reading page after page boring content can cause the strongest minds to wander. Taking practical tests are a great way to break down the monotony of learning. Taking a hands-on test challenges you and keeps you interested in the material. You can then review the test results and go to the questions you got wrong committing the correct answer to your memory. It's a great, streamlined way to learn. The training material is likely to be tested on ASVAB Again, ASVAB is a wide exam covering many different areas. ASVAB's practitioners, at least of high quality ones, know this and have spent time studying past tests to come up with practical tests that show questions covering areas commonly tested on a real exam. So taking practical tests is a great way to focus on the material that matters most and not waste your time studying content that probably won't be on the test. Practice Tests Make Learning Fun Another big advantage of practical tests is that they are fun. It's fun to challenge yourself and see what you know. Instead of wondering if you are learning the right things or just wasting your precious time, good practice tests can help you learn what you need to know while injecting your time training with excitement and competition as you try to outdo yourself every time you take the test. Practical tests can prepare you for real-world experience These tests, again high quality ones, are formatted as the real thing, so you can get used to the question and answer formats and timings, so nothing will surprise on the day of testing. You'll know what to expect and you'll be used to move from different concepts to different concepts, as is often required on ASVAB. For example, in the math section, you may have a problem using one popular mathematical principle, followed by another problem that relies on a different principle. This is common on a wide test as ASVAB and preparing your mind to do these jumps can allow you to answer more questions in less time and increase your score. Practice Tests build confidence again, you'd rather go to ASVAB not sure what to expect and not knowing if you've studied the right things or you'd rather have similar tests covering content usually tested for the real thing? Taking practical tests is a great way to build your knowledge, confidence and your ASVAB acquaintance so that you feel relaxed and confident on the day of testing. Day.
